

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

XI. *Observatio Eclipsæ Telluris Romæ habita in Ædibus Eminentissimi Cardinalis DE-VIA V. Non. i. e. d. 3 Maij, N. S. Apr. 22. V. S. MDCCXXXIV. per Didacum de Revillas, Abbat. Hieronym. R. S. S. & Andreæ Celsium, R. S. S. Astron. Profess. Upsal. R. S. Suec. Secr.*

*Clarissimo Præstantissimoque Viro*  
**EUSTACHIO MANFREDIO,**  
*Didacus de Revillas, Abbas Hieronym.*  
*S. P. D.*

**T**U Æ erga me humanitatis, amorisque erga Te mei recordationem in animo tuo excitandi, Ornatissime Manfredi, per opportunam suppeditat occasionem Solaris Deliquii Observatio, quam in jucunda, tibi que jam dudum familiari severiorum Musarum Diatriba, Ædibus nimirum Eminentissimi literatorum hominum Mœcenatis Cardinalis DE-VIA, divisis officiis una cum Doctissimo, tuique amantissimo Andrea Celsio, Astron. Prof. Upsal. habuimus. Hanc ad Te mittendam communi consilio

filio censuimus; ut quemadmodum Cœli cum tuis Ephemeridibus mirum consensum nostra hæc quoque Observatio probat; probes Tu num eadem ab Observationibus tuis minimè dissentiat: quod sanè speramus. Curam enim vero omnem, cum ex solaris speciei ad Meridianam lineam appulsu, tum ex æqualibus Solis altitudinibus, eâdem observationis die, & pridie etiam sæpius notatis, pro accurata temporis veri determinatione impensam testari possumus. Cæterum duplici, notæ optimæ Telescopio palmarum Romanarum circiter VI, Telluris defectum observabamus (longiorum siquidem tuborum usum nimia Solis ferè Meridiani altitudo, & alia quædam incomoda prohibebant): altero Solis imaginem directè ad oculum opacato vitro munitum transmittente, Eclipseos præsertim initium & finem; altero in adversâ Tabellâ, ut moris est, solarem speciem depingente, Phases intermedias intuebamur. Spem equidem hujuscemodi observationibus vacandi ademerant importunæ nubes, primùm oriente Sole australem horizontis plagam, totum deindè Cœlum penè inficientes. At dum densioribus rariores successere, etsi primum Planetarum osculum eripuerint, primas Phases aliquantulum incertas, & speciem circa Eclipseos finem veluti denticulatam exhibuerint; reliquas tamen observationes accuratè definire concedebant. Excipe ergo V. Cl. totius observationis seriem: & dum Literatorum omnium vota Te de Astronomia optimè meritum, incolumem, si unquam aliàs cupiunt, me ut soles amare perge.

Romæ IV Non. Maii MDCCXXIV.
